Softwares and skills

- C++/Python
- HTML
- CSS
- Javascript
- React-Js
- Bootstrap
- Node-js
- MongoDB
- WordPress
- Figma

Projects

Music Player Code Link   HTML | CSS | JavaScript | Git
- A music player project using HTML, CSS, and JavaScript is a web application that allows users to play and manage their music files. The project typically includes a user interface where the user can upload and organize their music library, as well as play and control music playback.
- The interface of the music player project should be visually appealing and intuitive, with features such as a playlist manager, volume control, play/pause button, and track progress indicator. The project should be responsive, enabling users to access it on desktop or mobile devices.

Ecommerce App Code Link   React-JS | Javascript | Boostrap | Figma | Git
- A frontend ecommerce website in React is a web application that enables users to browse and purchase products online. The project is built using the React framework, which allows for efficient and scalable front-end development.
- The website should have an attractive and responsive design, with a user-friendly interface that allows customers to easily navigate through the different categories of products. It should also include features such as a search bar, filter options, and a shopping cart.

Keeper App Code Link   React | javascript | | Git
- The Keeper Note Taking Project is a web application that allows users to create, save, and organize notes online.
- The project is typically built using React with ADD and DELETE the note functionality.

Drum Kit Code Link   HTML | CSS | JAVASCRIPT
- A drum kit is a percussion instrument with a set of drums and cymbals. A kit with 7 different sounds allows for a variety of rhythms and beats.
- Typically, a standard drum kit consists of a bass drum, snare drum, hi-hat cymbals, tom-toms, and a ride or crash cymbal. With 7 different sounds available, you could customize your drum kit to include your preferred set of instruments.

Hotel Management System Link   Python | Tkinter Library | Git
- A hotel management system project is a software application designed to help hotel staff manage and organize daily operations. The system includes various features, such as reservation management, room assignment, billing and payment processing, inventory management, and staff scheduling.
- A hotel management system project should be able to store customer information and reservation data in a database, as well as generate reports and analytics for the hotel management team to make informed decisions about their business.
